SPEEDART UNLEASHES EXTREME GEN 2 997 TURBO

650HP • 629LB FT • 205MPH+

12-inch wide, 20-inch diameter rear wheels will attempt to control 650hp and 629lb ft of torque. Good luck

Porsche specialist, Speedart, has released details of its most extreme tuning programme for the generation two 997 Series 911 Turbo, which sees the twin-turbocharged engine generate 650hp and 629lb ft of torque, an increase of 150hp and 150lb ft over the standard engine. At the heart of the conversion is a larger pair of VTG turbochargers, controlled by a modified ECU to take into account their increased appetite for exhaust gases. Speedart has also fitted a new, freer-breathing exhaust

system that includes a new manifold, sports cats and stainless steel silencers and tailpipes. It also includes a sound control switch for those who enjoy a UK track day or two. There is also a larger, less restrictive air filter and new, bigger intercoolers, too. When hooked up to Porsche's seven-speed PDK transmission, Speedart claim a 0-62mph time of 3.2 seconds and a maximum speed over 205mph. Harnessing all this power is a revised chassis that includes recalibrated settings for the PASM

suspension, which Speedart calls Street Sport through to Race Sport. The company has also given the BTR II 650 a wider footprint with a set of modular twin-spoke LSC forged 8.5x20-inch and 12x20-inch alloys front and rear. Completing the makeover is a extensive body kit consisting of a new front bumper design with a lower lip spoiler, complete with winglets on the trailing edge of the bumper for improved downforce and brake cooling. A pair of deeper side skirts

run the length of the car and a rear diffuser and an adjustable rear spoiler completes the look. Speedart also offers a range of interior upgrades, with a Formula One-style paddle-shift kit and carbon shelled sports seats among the options available. For further information regarding supplying and installing the conversion, visit the Speedart website: www.speedart.de, email: info@speedart.de, or call on: +49 7152 901100.
